CONTENTS

Vol. IV, Issue Nos. 10–12, 1960

Journal of Applied Polymer Science

ISSUE NO. 10, JULY–AUGUST

KISOU KANAMARU: Stabilization of Viscose Rayon by Heat Treatment by Means of Ammoniacal Preswelling Bath 1

YASUNA FUJIWARA: The Superstructure of Melt-Crystallized Polyethylene. I. Screwlike Orientation of Unit Cell in Polyethylene Spherulites with Periodic Extinction Rings 10

MARIE EASTERWOOD and W. A. MUELLER: Factors Affecting Viscose Ripening 16

L. H. SPERLING and MARIE EASTERWOOD: Chemical and Physical Nature of Insolubles: Acetone Solutions of Cellulose Acetate 25

J. R. DUNN and J. SCANLAN: A Modified Helical Spring Stress Relaxometer for Automatic and Manual Operation 34

H. P. SCHREIBER: A Study of Time Dependence of Polyethylene Flow in Capillary Viscometry 38

RICHARD STEELE: Catalysis of the Reaction of Urea-Formaldehyde Precondensates on Cellulose 45

G. H. KALB, D. D. COFFMAN, T. A. FORD, and F. L. JOHNSTON: Polymers from Vinyl Fluoride 55

V. L. SIMRIL and BARBARA A. CURRY: The Properties of Polyvinyl Fluoride Film 62

KEIICHI NAMBU: Studies on Chlorinated Polyethylenes. I. Infrared Spectra of Chlorinated Polyethylenes 69

ARTHUR NERSASIAN and DONALD E. ANDERSEN: The Structure of Chlorosulfonated Polyethylene 74

THOMAS F. PROTZMAN and GEORGE L. BROWN: An Apparatus for the Determination of the Minimum Film Temperature of Polymer Emulsions 81

P. J. CORISH: Infrared Spectroscopic Studies of Ultrathin Microtomed Sections of Polymers. Part I. Characterization and Structure Determinations of Cured, Black-Loaded Rubbers 86

R. J. VALLES, M. C. OTZINGER, and D. W. LEVI: Single-Point Determination of Intrinsic Viscosity 92

JOHN REHNER JR.: A Proposed Method for Estimating Polymer Molecular Weight Distribution Without Fractionation 95

F. BUECHE: Mechanical Degradation of High Polymers 101

F. BUECHE: Molecular Basis for the Mullins Effect 107

LETTERS TO THE EDITORS

S. MATSUOKA: The Properties of Marlex Crystallized at High Pressure 115

S. MATSUOKA and C. J. ALOISIO: On Melting Characteristics of Linear Polyethylene 116

S. W. LASOSKI, JR.: Moisture Permeability of Polymers. Effect of Symmetry of Polymer Structure 118

J. SCANLAN: Directed Scission in Rubber Vulcanizates 119

W. P. COX and R. L. BALLMAN: Calculation of the Apparent Viscosity of Polystyrene Melts 121

NOTES

J. VAN SCHOOTEN: Spherulite Cracking During Oxidative Aging of Polypropylene 122

D. E. KLINE: Dynamic Mechanical Properties of Epoxy Resins During Polymerization 123

JAMES R. KUPPERS and CHARLES E. REID: Diffusion in Amorphous Polymers 124

SUBJECT INDEX, VOLUME IV

Acetone, solutions, of cellulose acetate, 25
Acrylonitrile, grafting onto polypropylene films, 244
Adhesive layers, defects, 343
Aging, oxidative, natural rubber vulcanizates, 151
Alcohols, long-chain, polymerizable derivatives, 203
Alkyd resins, gelation point, 129
Alky acrylates, copolymerization, reactivity ratios, 203
Amorphous, polymers, diffusion in, 124
Carbon black, influence on rubber viscoelasticity, 212
Catalysis, isocyanate–hydroxyl reactions, 207
for urea–formaldehyde precondensates, 45
Cellulose, film formation, molecular orientation, 225
Cellulose acetate, nature of acetone solutions, 25
Cellulosic solutions, particle distribution, 193
CFN polymers, mechanical and optical properties, 349
Creep, gelatin, 200
Crystallization, Marlex, properties, 115
Elastomers, response to forcing function, 269
Degradation, mechanical, of high polymers, 101
Dicumyl peroxide vulcanizates, oxidative aging, 151
Die entry angle, in polyethylene extrusion, 362
Diffusion, in amorphous polymers, 124
Diluent-polymer interactions, micromethod for determining, 181
Distribution, particles in cellulosic solutions, 193
Dynamic tests, instrumentation and machines, 296
tensile tester at ultra-high strain rates, 284
Epoxy resins, dynamic mechanical properties, during polymerization, 123
Extrudates, polyethylene, distortion, 368
Fiber formation, from polymer melts (*erratum*), 128
Filament distortion, in polyethylene extrusion, 362
Filler, concentration in polymers, tensile properties, 259
Film, cellulose, molecular orientation development, 225
polymer, brittleness, 332
polymer, new high-speed tensile tester, 291
temperature, minimum, apparatus for determining, 81
Forcing function, elastomer response to, 269
Formaldehyde-urea, precondensate on cellulose, catalysis, 45
Free-radical polymerization, methyl α-cyanoacrylate, 231
Gelatin, creep studies. 200
Gelation point, alkyd resins, 129
Gravimetric dilution viscometry, 250
High speed testing, problems of, 258
Impact tests, textiles, strain measurement, 277
Infrared spectra, chlorinated polyethylenes, 69
cured black-loaded rubbers, 86
cyclized natural rubber, 367
Inhibitors, concentration of, and polymerization of styrene, 166
Instrumentation, dynamic tests, 296
Intrinsic viscosity, single-point determination, 92
Irradiated polymers, redox grafting, 246
Isocyanate, catalysis, hydroxyl reaction, 207
Isotactic content, polypropylene, 219
Light-scattering, solutions of polyisoprenes, 237
Loading, of metals, moving bar impact and gas expansion, 314
Machines, dynamic tests, 296
moving bar impact and gas expansion, metals loading, 314
Marlex, crystallized at high pressure, 115
Melting characteristics, linear polyethylene, 116
Melts, fiber formation from (*erratum*), 128
polystyrene, apparent viscosity, 121
Membranes, ultrafiltration of salt solutions, 354
Metals, dynamic loading, machines, 314
Methyl α-cyanoacrylate, free-radical polymerization, 231
Micromethod, polyvinyl chloride–diluent interactions, 181
Moisture permeability, effect of symmetry of structure, 118
Molecular, basis for Mullins effect, 107
orientation, during cellulose film formation, 225
weight distribution, method for determining, 95
Mullins effect, molecular basis for, 107
Nylon 66, cold drawing, 254
Orientation, molecular, during cellulose film formation, 225
Orientation phenomena (*erratum*), 128
Oxidation, vulcanized rubber, 364
Particle distribution, cellulosic solutions, 193
Permeability, gases and vapors, polyethylene copolymers, 159
moisture, effect of symmetry of structure, 118
Phenol derivatives, flexural deformation temperature, 141
Photodegradation, in solution, 253
Polycapronamide, fiber from polymer melts (*erratum*), 128
Poly-2,3-epoxybutyl derivative of phenol, flexural deformation temperature, 141
Polyethylene, chlorinated, 69
chlorosulfonated, structure, 74
container, in oxygen flask combustion, 248
copolymers, permeability to gases and vapors, 159
extrudates, distortion, 368
extrusion, 362
flow in capillary viscometry, 38
grafting, redox, 246
linear, melting characteristics, 116
superstructure of melt-crystallized, 10
Polyglycidyl, flexural deformation temperature, 141
Polyisoprenes, solutions, light scattering, 237
Polypropylene, films, acrylonitrile grafting, 244
grafting, redox, 246
isotactic content, 219
spherulite cracking during aging, 122
Poly(vinyl acetal) solutions, non-Newtonian viscosities, 243
Polyvinyl chloride, and diluent, interactions, 181
Polyvinyl fluoride film, properties, 62
Preirradiation grafting, acrylonitrile onto polypropylene films, 224
Reactivity ratios, copolymerization of alkyl acrylates, 203
Redox polymerization, polyethylene and polypropylene, grafting, 246

Relaxometer, modified helical spring stress, 34
Resins, alkyd, gelation point, 129
epoxy, dynamic mechanical properties during polymerization, 123
Retarders, concentration of, and polymerization of styrene, 166
Rubber, cyclized natural, infrared spectrum, 367
differential thermal analysis, 366
infrared spectroscopy, 86
oxidation of vulcanized, 364
viscoelasticity, and carbon black, 212
vulcanizates, directed scission in, 119
Salt solutions, ultrafiltration by membranes, 354
Scission, directed, in rubber vulcanizates, 119
Solution, photodegradation in, 253
polyisoprenes, light scattering, 237
salt, ultrafiltration by membranes, 354
Solvents, retention by cyclized natural rubber, 367
Spectra, chlorinated polyethylenes, 69
cured black-loaded rubbers, 86
cyclized natural rubber, 367
Spherulite, cracking during aging of polypropylene, 122
Stabilization, viscose rayon, by heat treatment, 1
Strain measurement, in impact tests, textiles, 277
Styrene, effect of inhibitor and retarder concentration, 166
Superstructure, of melt-crystallized polyethylene, 10
Temperature, bath, low, 252
dilatometric transition, ethylene–propylene copolymers, 251
flexural deformation, of phenol derivatives, 141
minimum film, polymer emulsions, apparatus, 81
transition, automatic recording, 249
Tensile properties, highly filled polymers, 259
Tensile tester, elastomers at ultra-high strain rates, 284
new high speed, polymer films, 291
Testing, problems of high speed tests, 258
Textiles, strain measurement in impact tests, 277
Thermal analysis, differential, hard rubber reactions, 366
Thermal expansion, automatic recording, 249
Urea–formaldehyde, precondensate on cellulose, catalysis, 45
Vinyl fluoride, polymers from, 55
Viscoelasticity, rubber, and carbon black, 212
Viscometry, capillary, polyethylene flow, 38
gravimetric dilution, 250
Viscose, factors affecting ripening, 16
rayon, stabilization with heat treatment, 1
Viscosity, apparent, polystyrene melts, calculation, 121
intrinsic, single-point determination, 92
non-Newtonian, poly(vinyl acetal) solutions, 243
Vulcanized rubber, directed scission, 119
natural, oxidative aging, 151
oxidation, 364
X-ray diffraction, hairs and feathers, 175, 179

Journal of APPLIED POLYMER SCIENCE

VOLUME IV

JULY–AUGUST 1960

Issue Number 10

EDITORIAL BOARD: L. BATEMAN • J. DILLON • N. G. GAYLORD • J. LE BRAS H. MARK • M. MORTON • F. PATAT •

ADVISORY BOARD

R. F. BOYER
H. H. CUDD
R. DEAN
J. D'IANNI

CONTENTS

KISOU KANAMARU: Stabilization of Viscose Rayon by Heat Treatment by Means of Ammoniacal Preswelling Bath 1

YASUNA FUJIWARA: The Superstructure of Melt-Crystallized Polyethylene. I. Screwlike Orientation of Unit Cell in Polyethylene Spherulites with Periodic Extinction Rings 10

MARIE EASTERWOOD and W. A. MUELLER: Factors Affecting Viscose Ripening 16

L. H. SPERLING and MARIE EASTERWOOD: Chemical and Physical Nature of Insolubles: Acetone Solutions of Cellulose Acetate 25

J. R. DUNN and J. SCANLAN: A Modified Helical Spring Stress Relaxometer for Automatic and Manual Operation 34

H. P. SCHREIBER: A Study of Time Dependence of Polyethylene Flow in Capillary Viscometry 38

RICHARD STEELE: Catalysis of the Reaction of Urea–Formaldehyde Precondensates on Cellulose 45

G. H. KALB, D. D. COFFMAN, T. A. FORD, and F. L. JOHNSTON: Polymers from Vinyl Fluoride 55

V. L. SIMRIL and BARBARA A. CURRY: The Properties of Polyvinyl Fluoride Film 62

KEIICHI NAMBU: Studies on Chlorinated Polyethylenes. I. Infrared Spectra of Chlorinated Polyethylenes 69

ARTHUR NERSASIAN and DONALD E. ANDERSEN: The Structure of Chlorosulfonated Polyethylene 74

THOMAS F. PROTZMAN and GEORGE L. BROWN: An Apparatus for the Determination of the Minimum Film Temperature of Polymer Emulsions 81

P. J. CORISH: Infrared Spectroscopic Studies of Ultrathin Microtomed Sections of Polymers. Part I. Characterization and Structure Determinations of Cured, Black-Loaded Rubbers 86
